# HR Analytics Dashboard

Project Documentation | Dashboard Overview and Insights

## 1. Project Overview

The HR Analytics Dashboard presents employee headcount, attrition, employee age groups, education categories, and job satisfaction information in one interactive-style report. Its purpose is to help users review workforce patterns and identify areas that may need further HR investigation.

## 2. Key Performance Indicators (KPIs)

| Metric | Value shown | Meaning |
|---|---|---|
| Overall Employees | 1,470 | Total employee records represented in the dashboard. |
| Attrition | 237 | Number of employees recorded as attrition. |
| Attrition Rate | 16.12% | Attrition rate displayed by the dashboard. |
| Active Employees | 1,233 | Employees shown as active. |
| Average Age | 37 | Average employee age shown on the dashboard. |

## 3. Dashboard Visuals

**Department-wise Attrition:** A pie chart splits the displayed attrition counts across R&D; (133; 56.12%), Sales (92; 38.82%), and HR (12; 5.06%).

**Employee Count by Age Group and Gender:** A stacked column chart compares female and male employee counts across Under 25, 25–34, 35–44, 45–54, and Over 55 age groups.

**Job Satisfaction Rating:** A table compares satisfaction ratings from 1 to 4 across job roles, with totals for each role and an overall total of 1,470.

**Attrition by Education:** A horizontal bar chart shows the sum of attrition count by education field. The visible categories include Life Sciences, Medical, Marketing, Technical Degree, Other, and Human Resources.

**Attrition Rate by Gender and Age Group:** Donut charts compare the displayed attrition measures for Under 25, 25–34, 35–44, 45–54, and Over 55. Some labels are truncated in the screenshot, so exact segment percentages should be checked in the dashboard.

## 4. Filters and Interactivity

The top of the dashboard includes education-level buttons: Associates Degree, Bachelor's Degree, Doctoral Degree, High School, and Master's Degree. These appear intended to filter the report by education level. Confirm their behavior in Power BI before describing them as interactive filters.

## 5. Initial Observations

• The dashboard displays 1,470 overall employees, including 1,233 active employees and 237 attrition records.

• The displayed attrition rate is 16.12%, and the average employee age is 37.

• In the department-wise attrition visual, R&D; has the largest displayed share, followed by Sales and HR.

• Employee counts are compared by gender across five age groups.

• Job satisfaction is broken down by job role and rating level, allowing role-level comparison.

## 6. Potential Business Use

HR teams can use this dashboard to monitor attrition, compare employee groups, review satisfaction patterns by role, and decide where additional investigation may be useful. The visuals show associations and counts; they do not by themselves explain why employees leave or prove the causes of attrition.
